PATENT APPLICATION

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re application of

Karin GOLZ-BERNER and Leonhard ZASTROW

Appln. No.: 10/520,562

Confirmation No.: 5263

Filed: January 7, 2005

Group Art Unit: 1616

For: ANTI-AGEING SKIN COSMETIC

Attorney Docket No.: 3975.039

Customer Number: 000041288

**INFORMATION DISCLOSURE STATEMENT
UNDER 37 C.F.R. §1.97 and §1.98**

Mail Stop Amendment

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

In accordance with the duty of disclosure under 37 C.F.R. §1.56, Applicants hereby notify the U.S. Patent and Trademark Office of the following documents for the above-identified application. Copies of the documents set forth below and listed on the attached Form PTO/SB/08A, a copy of an Office Action which issued in the corresponding German patent application are provided herewith. The position of the German Examiner was that individual components of the present invention are individually known, thus the combination would have been obvious (relying on a long list of references).

Applicants submit that plants and certain plant extracts are known, but the form of the extract, and most importantly, the combination according to the present invention, and novel and patentable.

More specifically, the present invention relates to a cosmetic based on various natural raw materials, which can be used to counter the ageing processes of the human skin, and in particular comprises an extract from a mixture of fig leaves and fruits; an extract from pomegranate fruits; a ground dry mixture of rosemary stems and leaves; liposomes containing an extract from peeled musk melons; liposomes containing a plankton extract containing the photolyase enzyme; liposomes containing a micrococcus lysate containing the UV-endonuclease enzyme; and other active substances, carrier substances, adjuvants or mixtures thereof.

On the basis of the selection of specific forms of ingredients and the specific combination of at least six select ingredients, the high effectiveness and the particular degree of the anti-aging, anti-wrinkle and moisturizing properties of the inventive formulation have been proven in clinical studies with 30 test subjects with ages from 30 to 45 to be greater than would have been expected.

Document 1

Document 12 is an English language document in the patent family of Document 1.

Certainly Document 1 discloses, among a list of active ingredients, Rosemary extract. In Document 1 the nature of the extract is not described.

The present invention does not use, as in the cited art, a Rosemary extract, that is, not an extract containing a small specific part of the plant composition obtained using a specific extraction means, but rather a mixture of pulverised dry mixture of buds and leaves. Certainly, the chemistry of the dry powder of whole buds and leaves is different from that of an extract. Applicants submit that the higher anti-free-radical effect of the present composition is attributable to this difference in composition.

Document 2

Applicants are not aware of any English language document equivalent to Document 2, other than an English language abstract:

A cosmetic sunscreen skin agent incorporates a quantity of phospholipid-liposomes with a DNA repair enzyme within a substrate based on either alcoholic oil-in-water, a water in-oil emulsion, or an alcoholic hydrogel.

Documents 3

Document 3 is in the English language.

This reference teaches the enzymes photolyase and endonuclease in cosmetic preparations.

Documents 4

Document 13 is an English language document in the patent family of Document 4.

Document 4 teaches an aqueous extract of melon (*Cucumis melo*), with uses including cosmetic preparations.

Documents 5

Document 14 is an English language document in the patent family of Document 5.

Documents 6

Document 6 is in the English language.

Document 6 discloses, among a list of active ingredients, Rosemary extract. In Document 6 the extract is referred to as an "aromatic oil".

The present invention does not use, as in the cited art, a Rosemary extract, that is, not an extract containing a small specific part of the plant composition obtained using a specific extraction means, but rather a mixture of pulverised dry mixture of buds and leaves. Certainly, the chemistry of the dry powder of whole buds and leaves is different from that of an extract. Applicants submit that the higher anti-free-radical effect of the present composition is attributable to this difference in composition.

Documents 7

Document 7 is in the English language.

Document 7 discloses, among a list of active ingredients (Vitamin A, Vitamin E), Rosemary extract. In Document 6 the extract is referred to as "Pronalen Rosemary", apparently a commercially available extract.

The present invention does not use, as in the cited art, a Rosemary extract, that is, not an extract containing a small specific part of the plant composition obtained using a specific extraction means, but rather a mixture of pulverised dry mixture of buds and leaves. Certainly, the chemistry of the dry powder

of whole buds and leaves is different from that of an extract. Applicants submit that the higher anti-free-radical effect of the present composition is attributable to this difference in composition.

Documents 8

Document 8 is in the English language.

This reference teaches an aqueous (steam) extract of the plant *Ficus carica*, for use against dry skin.

In contrast, the composition of the present invention contains an extract from leaves and fruits, extracted with water and propylene glycol. Thus, the composition is different, and in accordance with the present invention, the use is also different, namely, cell regeneration.

On the basis of the selection of specific forms of ingredients and the specific combination of at least six select ingredients, the high effectiveness and the particular degree of the anti-aging, anti-wrinkle and moisturizing properties of the inventive formulation have been proven in clinical studies with 30 test subjects with ages from 30 to 45 to be greater than would have been expected.

Documents 9

Document 15 is an English language document in the patent family of Document 9.

Document 9 teaches a skin peel composition including various plant extracts, including dried leaf of Ficus carica.

Documents 10

Document 16 is an English language document in the patent family of Document 10.

As disclosed in the present specification, page 1, Document 10 describes a preparation which contains extracts from the Laminaria saccharina alga, root extracts from Lilium candidum and extracts from Glycyrrhyza glabra and achieves a particular skin-cleansing effect.

Documents 11

Document 17 is an English language document in the patent family of Document 11.

As disclosed in the present specification, page 1, Document 11 describes rosemary extract to counter skin ageing.

The present Information Disclosure Statement is being filed after three months from the application's filing date but before the mailing date of the first Office Action on the merits, therefore no Certification Under 37 C.F.R. §1.97(e) or fee under 37 C.F.R. §1.17(p) is required.

The submission of the listed documents is not intended as an admission that any such document constitutes prior art against

U.S. PATENT APPLICATION

the claims of the present application. Applicant does not waive any right to take any action that would be appropriate to antedated or otherwise remove any listed document as a competent reference against the claims of the present application.

Applicant respectfully requests that the listed documents be considered by the Examiner and be made of record in the present application and that an initialed copy of Form PTO-1449 be returned in accordance with MPEP §609.

Respectfully submitted,

Stephan A. Pendorf
